

Climate Action Team Tip of the Week: Transport Yourself!

There are many sources of greenhouse gas (GHG) emissions generated from campus activities. One significant source is transportation, which includes campus fleet vehicles, International Programs travel, and student and employee commuting.

We have pledged to reduce our overall transportation emissions by 50% by 2015! You can help:

- Minimize work crew driving by good planning and preparation, avoid using low efficiency crew vehicles and maximize use of golf carts, bicycles and feet. Set a goal to reduce fuel use. The Motorpool keeps track of all gasoline and diesel use on campus and the Campus Greening Crew analyzes the data every term, so you'll know if you reach your goal.
- Start carpooling! Sign up for the College's on-line ride share tool [ZIMRIDE](#) to help find a match.
- When you travel abroad, sign up for International Programs' certifiable carbon offset option.

The Climate Action Team says, "Thanks for the effort."
